## 1. General Description

This specification applies to the 37.0 inch Color TFT-LCD Module T370HW02 V9. This LCD module has a TFT active matrix type liquid crystal panel 1920x1080 pixels, and diagonal size of 37.0 inch. This module supports 1920x1080 HDTV mode (Non-interlace). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot.

This model use 2008 Front Mount Bezel structure with narrow bezel design.

The T370HW02 V9 has been designed to apply the 10-bit 4 channel LVDS interface method.

It is intended to support displays where high brightness, wide viewing angle, high color saturation, and high color depth are very important.

The T370HW02 V9 model is RoHS verified which can be distinguished on panel label.

### \* General Information

Items	Specification	Unit	Note
Active Screen Size	37.01	inch	
Display Area	819.36 (H) x 460.89(V)	mm	
Outline Dimension	855.8(H)×497.4(V)×44.9(D)	mm	
Driver Element	a-Si TFT active matrix		
Display Colors	10 bit, 1073.7M	Colors	
Number of Pixels	1920 x 1080	Pixel	
Pixel Pitch	0.42675(H) x 0.42675(W)	mm	
Pixel Arrangement	RGB vertical stripe		
Display Operation Mode	Normally Black		
Surface Treatment	AG Haze= 11%, 3H		
Weight	9,000(Max)	g	
Lamp quantity, type	20, Straight type	Pcs	

## 2. Absolute Maximum Ratings

The following are maximum values that, if exceeded, may cause permanent damage to the device.

Item	Symbol	Min	Max	Unit	Note
Logic/LCD Drive Voltage	Vcc	-0.3	14	[Volt]	[1]
Input Voltage of Signal	Vin	-0.3	4	[Volt]	[1]
Operating Temperature	TOP	0	50	[°C]	[2]
Operating Humidity	HOP	10	90	[%RH]	[2]
Storage Temperature	TST	-20	60	[°C]	[2]
Storage Humidity	HST	10	90	[%RH]	[2]
Panel surface temperature	PST		65	[°C]	

Note 1: Duration = 50msec

Note 2 : Maximum Wet-Bulb should be 39°C and No condensation.

The relative humidity must not exceed 90% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C.

### 3. Electrical Characteristics

The T370HW02 V9 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the BLU, is to power lamps.

#### 3-1 Electrical Characteristics

(Ta=25±2°C)

Parameter		Symbol	Values			Unit	Notes
			Min	Typ	Max		
Power Supply Input Voltage		V <sub>CC</sub>	10.8	12.0	13.2	V <sub>dc</sub>	
Power Supply Input Current		I <sub>CC</sub>		1	1.2	A	[1]
Power Consumption		P <sub>c</sub>	-	12	14.4	Watt	[1]
Inrush Current		I <sub>RUSH</sub>	-		4	A <sub>peak</sub>	[2]
LVDS Interface	Differential Input High Threshold Voltage	V <sub>TH</sub>			100	mV	[3]
	Differential Input Low Threshold Voltage	V <sub>TL</sub>	-100			mV	[3]
	Common Input Voltage	V <sub>ICM</sub>	0.6	1.2	1.8	V	
CMOS Interface	Input High Threshold Voltage	V <sub>IH</sub> (High)	2.0		3.3	V <sub>dc</sub>	
	Input Low Threshold Voltage	V <sub>IL</sub> (Low)	0		0.8	V <sub>dc</sub>	
Life Time			50000			Hours	

#### Note :

- The check pattern is base on white pattern. The ripple voltage should be controlled under 10% of V<sub>CC</sub>  
V<sub>CC</sub>=12.0V,  $f_v = 120\text{Hz}$ , fCLK=75Mhz for one channel, 25°C, Test Pattern : White Pattern
- Measurement condition :

Figure 1: Measurement of I<sub>rush</sub>

3. Measurement of LVDS differential voltage is shown in Figure 2.

**Figure 2 : LVDS Differential Voltage**

4. The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC Inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD Assembly should be operated in the same condition as installed in your instrument.
5. Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to conducting tape, TFT-LCD Module have a low luminance and the inverter has abnormal action because leakage current occurs between lamp wire and conducting tape.
6. The relative humidity must not exceed 90% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C. When operate at low temperatures, the brightness of CCFL will drop and the life time of CCFL will be reduced.

### 3-2 Interface Connections

LCD connector : JAE FI-RE51S-HF

39	R4_4+	LVDS Channel 4, Signal 4+
40	GND	Ground
41	GND	Ground

**Note:**

1. All GND (ground) pins should be connected together and should also be connected to the LCD's metal frame.  
All Vcc (power input) pins should be connected together.

## Dual LVDS Channel Color Mapping

LVDS Option = L (GND) or OPEN = NS

LVDS Option = H (3.3V) → JEIDA

## Backlight Specification

### 1. Electrical specification

	Description		Min	Typ	Max	Unit	Condition
1	BL Operating Voltage	VBL	1033	1148	1263	Vrms	1. BL one side operating voltage at boost dimming ration 100% 2. Base on JAR measurement data (note 1.)
2	BL Operating Current	IBL	134	142	150	mArms	1. Each lamp current=6.1mA 2. Estimated leakage current~1mA. 3. BL one side operating current at boost dimming ration 100%
3	BL Total Power Dissipation	PBL	131	138	145	Watt	1. Dimming at 100% 2. IPI board input power=150W(typ)
4	Starting Voltage	At 0℃	Vs	1870	2020	Vrms	1.BL one side striking voltage when open connector
		At 25℃		1725	1870		
5	Operating frequency	fo	60	62	64	kHz	For avoid water flow issue, operating frequency is suggested.
6	Striking time	Ts	1500	-		msec	
7	PWM Operating Frequency	F_PWM	95	-	240	Hz	95~140 might cause waterfall noise but not influence panel function
8	External PWM Dimming Duty ratio	D_PWM	10	-	100	%	Note2
9	Lamp type		Straight type				
10	Number of lamps		20			pcs	
11	Type of current balance		Capacitor				
12	C ballast	Cb	14.25	15	15.75	pF	15pf/6kV

(Ta=25±5℃, Turn on for 45 minutes)

Note 1:

$$V_{BL} = \sqrt{\left(\frac{V_L}{2}\right)^2 + (V_C)^2}$$

Note2: (a) Uniformity and flicker does not guarantee below 20% dimming control.

(b) 10% dimming function okay and no backlight shut down

## 2. Lamp specification

	Description		Min	Typ	Max	Unit
1	Lamp Voltage	V <sub>lamp</sub>	1017	1130	1243	Vrms
2	Lamp Current	I <sub>lamp</sub>	5.5	6.1	6.7-	mArms
3	Lamp frequency	f <sub>lamp</sub>	30	45	80	KHz
4	Starting Voltage	At 25°C	-		1450	Vrms
		At 0°C	-		1740	Vrms
5	Discharge Stabilization Time	T <sub>s</sub>	-	-	3	min
6	Striking time	T <sub>s</sub>	-	-	500	msec
7	Life time (I <sub>lamp</sub> =6.1mA)		50K	60K		-

## Inverter units

Connector Type : Cvilux CI063PIH0J-NH

Connector pin define is shown below:

CN1:

PIN #	Symbol	Description
1	High	I/P board high voltage supply
2	N.C.	No connection
3	High	I/P board high voltage supply

CN2:

PIN #	Symbol	Description
1	High	I/P board high voltage supply
2	N.C.	No connection
3	High	I/P board high voltage supply

### Measurement method

### 3-3 Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

**Timing Table (DE only Mode)**

Signal	Item	Symbol	Min	Type	Max	Unit
Vertical Section	Period	Tv	1090	1130	1392	Th
	Active	Tdisp (v)	1080			Th
	Blanking	Tblk (v)	10	50	312	Th
Horizontal Section	Period	Th	550	560	580	Tclk
	Active	Tdisp (h)	480			Tclk
	Blanking	Tblk (h)	70	80	100	Tclk
Clock	Frequency	1/Tclk	66	75.936	80.74	MHz
Vertical Frequency	Frequency	Freq	97		123	Hz
Horizontal Frequency	Frequency	Freq	120	135.6	139.2	KHz

1.) Display position is specific by the rise of DE signal only.

Horizontal display position is specified by the falling edge of 1<sup>st</sup> DCLK right after the rise of ENAB, is displayed on the left edge of the screen.

Vertical display position is specified by the rise of DE after a "Low" level period equivalent to eight times of horizontal period. The 1<sup>st</sup> data corresponding to one horizontal line after the rise the of ENAB is displayed at the top line of screen.

3.) If a period of DEB "High" is less than 1920 DCLK or less than 1080 lines, the rest of the screen displays black.

4.) The display position does not fit to the screen if a period of DE "High" and the effective data period do not synchronize with each other.

### 3-4 Signal Timing Waveforms

### 3-5 Color input data assignment

The brightness of each primary color (red, green and blue) is based on the 10 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

#### COLOR DATA REFERENCE

Color		Input Color Data																													
		RED										GREEN										BLUE									
		MSB					LSB					MSB					LSB					MSB				LSB					
		R9	R8	R7	R6	R5	R4	R3	R2	R1	R0	G9	G8	G7	G6	G5	G4	G3	G2	G1	G0	B9	B8	B7	B6	B5	B4	B3	B2	B1	B0
Basic Color	Black	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

### 3-6 Power Sequence of LCD Module

#### 3.6.1 Power Sequence for LCD

Parameter	Values			Units
	Min.	Typ.	Max.	
T1	0.47	-	30	ms
T2	0.1	-	50	ms
T3	500	-	-	ms
T4	100	-	-	ms
T5	0.1	-	50	ms
T6	-	-	30	ms
T7	1000	-	-	ms

**Note:**

The timing controller will not be damaged in case of TV set AC input power suddenly shut down. Once power reset, it should follow power sequence as spec. definition.

- (1) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become abnormal screen.

## 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 45 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0°.

### Testing Condition:

FIG.1 Measurement equipment

Parameter		Symbol		Condition	Value			Units	Notes
					Min.	Typ.	Max.		
Contrast Ratio		CR		$\varphi = 0^\circ, \theta = 0^\circ$ Viewing Normal angle	2000	2500			1
Surface Luminance, white		LWH			400	500		cd/m <sup>2</sup>	2
Gamma					2.1	2.3	2.5		
Luminance Variation		$\hat{\delta}_{\text{WHITE}}$	9 pts				1.3		3
Response Time	Gray to Gray	$T_\gamma$				5.5		ms	4
Color gamut	NTSC					72		%	
Color Coordinates (CIE 1931)	RED	$R_X$			Typ -0.03	0.64	Typ +0.03		
		$R_Y$				0.33			
	GREEN	$G_X$				0.29			
		$G_Y$				0.6			
	BLUE	$B_X$				0.15			
		$B_Y$				0.06			
	WHITE	$W_X$				0.280			
		$W_Y$				0.290			
Viewing Angle	x axis, right	$\theta_r$	( $\varphi = 0^\circ$ )	CR $\geq$ 10		89	Degree	5	
	x axis, left	$\theta_l$	( $\varphi = 180^\circ$ )			89			
	y axis, up	$\theta_u$	( $\varphi = 90^\circ$ )			89			
	y axis, down	$\theta_d$	( $\varphi = 270^\circ$ )			89			

(Ta=25±2°C)

### Note:

1. Contrast ratio will be measured in the center of panel (point 5 in Figure 2), Contrast Ratio (CR) is defined mathematically as:

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance of } L_{\text{on5}}}{\text{Surface Luminance of } L_{\text{off5}}}$$

2. Surface luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. From more information see FIG 2. When  $V_{\text{DDB}} = 24\text{V}$ ,  $I_{\text{DDB}} = 6.04\text{A}$ .  $L_{\text{WH}} = L_{\text{O5}}$ . Where  $L_{\text{on5}}$  is the luminance with all pixels displaying white at center 5 location.
3. The variation in surface luminance,  $\delta\text{WHITE}$  is defined (center of Screen) as:  

$$\delta\text{WHITE(9P)} = \frac{\text{Maximum}(L_{\text{on1}}, L_{\text{on2}}, \dots, L_{\text{on9}})}{\text{Minimum}(L_{\text{on1}}, L_{\text{on2}}, \dots, L_{\text{on9}})}$$
4. Response time  $T_y$  is the average time required for display transition by switching the input signal for five luminance ratio (0%, 25%, 50%, 75%, 100% brightness matrix) and is based on  $f_v = 120\text{Hz}$  to optimize.

	0%	25%	50%	75%	100%
0%		t0%-25%	t0%-50%	t0%-75%	t0%-100%
25%	t25%-0%		t25%-50%	t25%-75%	t25%-100%
50%	t50%-0%	t50%-25%		t50%-75%	t50%-100%
75%	t75%-0%	t75%-25%	t75%-50%		t75%-100%
100%	t100%-0%	t100%-25%	t100%-50%	t100%-75%	

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG4.

**FIG. 2 Luminance measurement positions**

The response time is defined as the following figure and shall be measured by switching the input signal for “any level of gray(bright)” and “any level of gray(dark)”.

FIG.3 Measurement of Response Time

FIG.4 Measurement of viewing angle

## 5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model T370HW02 V9. Detailed mechanical drawings are shown in the following pages.

Outline Dimension	Horizontal	855.8 mm
	Vertical	497.4 mm
	Depth	44.9 mm
Bezel Opening	Horizontal	827.8 mm
	Vertical	469.4 mm
Active Display Area	Horizontal	819.36 mm
	Vertical	460.89 mm
Weight	9,000g (Typ.)

## 6. Reliability

Environment test condition:

No	Test Item	Condition
1	High temperature storage test	Ta=60℃, 300hr
2	Low temperature storage test	Ta=-20℃, 300hr
3	Temperature humidity bias test	Ta=50℃, 80%RH, 300hr
4	High temperature operation test	Ta=50℃, 300hr
5	Low temperature operation test	Ta=0℃, 300hr
6	Vibration test (non-operating)	(10 ~ 300Hz/1.5G/11min SR, XYZ 30min/axis) Vibration level : 1.5G RMS, Bandwidth : 10-300Hz Duration: X, Y, Z 30min one time each direction
7	Shock test (non-operating)	Shock level: 50G Waveform: half sine wave, 11ms Direction: ±X, ±Y, ±Z One time each direction
8	Vibration test (with carton)	Random wave (1.5Grms 10~200Hz) 30mins / Per each X.Y.Z axes
9	Drop test (with carton)	Height: 38 cm 1 corner, 3 edges, 6 surfaces (ASTMD4169-I)

## 7. International Standard

### 7-1 Safety

- (1) UL1950 Third Edition, Underwriters Laboratories, Inc. Jan. 28, 1995  
Standard for Safety of Information Technology Equipment Including electrical Business Equipment.
- (2) CAN/CSA C22.2 No. 950-95/60950 Third Edition, Canadian Standards Association,  
Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.
- (3) EN60950: 1992+A2: 1993+A2: 1993+C3: 1995+A4: 1997+A11: 1997  
IEC 950: 1991+A1: 1992+A2: 1993+C3: 1995+A4:1996  
IEC 60065 : vision 7.0  
European Committee for Electrotechnical Standardization (CENELEC)  
EUROPEAN STANDARD for Safety of Information Technology Equipment Including Electrical Business Equipment.

### 7-2 EMC

- a) ANSI C63.4 “Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHz to 40GHz. “American National standards Institute(ANSI), 1992
- b) C.I.S.P.R “Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment.” International Special committee on Radio Interference.
- c) EN 55022 “Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment.” European Committee for Electrotechnical Standardization. (CENELEC), 1998

## 8. Packing

### A. Panel Label:

#### **TW8601400099-PM0200**

TW: T: Taiwan, A/B: China

00099: Panel Serial Number

PM: AUO internal code

### B. Carton Label:

## PACKING METHODS:

**Packing Specification:**

	Item	Specification			Packing Remark
		Qty.	Dimension	Weight (kg)	
1	Packing BOX	5 pcs/box	965(L)mm*280(W)mm*610(H)mm	45	
2	Pallet	1	1140(L)mm*980(W)mm*140(H)mm	15	
3	Boxes per Pallet	6 boxes/Pallet (By Air) ; 9 Boxes/Pallet (By Sea)			
4	Panels per Pallet	30 pcs/pallet(By Air) ; 45 Boxes/Pallet (By Sea)			
	Pallet after packing	30 (by Air)	1140(L)mm*980(W)mm*1360(H)mm (by Air)	321 (by Air)	
		45 (by Sea)	1140(L)mm*980(W)mm*2110(H)mm (by Sea)	491 (by Sea)	

## 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

### 9-1 MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizer with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizer. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2 OPERATING PRECAUTIONS

- (1) The device listed in the product specification sheets was designed and manufactured for TV application
- (2) The spike noise causes the mis-operation of circuits. It should be lower than following voltage:  $V=\pm 200\text{mV}$  (Over and under shoot voltage)
- (3) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (4) Brightness of CCFL depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (5) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (6) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (7) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

### 9-3 ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wristband etc. And don't touch interface pin directly.

### 9-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

### 9-5 STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

### 9-6 HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the Bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

## Appendix :

### 1. Deep (10%) dimming life time

#### Deep (10%) dimming life-time

The life-time of bare lamp can meet 50,000 hours under ambient temperature 25°C and PWM waveform as shown below.

Parameter	Value			Unit	Note
	Min	Typ	Max		
T0	2	-	-	sec	100% No dimming
T1	3	-	-	min	PWM duty 20~ 100%
T2	-	-	10	min	PWM duty 10~ 100%
T3	T2*5	-	-	min	PWM duty 20~ 100%

#### Note:

1. BL operation condition follow current AUO product specification as item 4 and 5. Please refer to each product specification.
2. For IPB application, flicker or lamp striking instability should be prevented. Especially for deep dimming occasion.
3. The repaid change of lamp surface temperature could induce luminance instability due to dynamic dimming application.
4. AUO can guarantee the uniformity and flicker above 20% dimming condition.
5. 10% dimming function is okay ( panel operation temperature min 0°C, max 50°C ).
